

VISIONS LEVEL C-25 STUDENT TEXTS

1

A New Vision of Science in Education

Joanna Fredericks feared that she was becoming the teacher she'd vowed never to be. She'd arrived at Tubman Middle School a year and a half earlier to teach science after a successful career in geographical information systems. While she'd enjoyed her previous job, she wanted to do something that would make a real difference in the lives of children. So she enrolled in a highly regarded university teaching master's program, became certified in middle school science, and took a job in the city near her home.

Her colleagues at Tubman Middle School considered her a smart, energetic, and passionate teacher. But her new job was turning out to be much harder than Ms. Fredericks had expected. Her school district, one of the largest, most diverse, and poorest in the state, had adopted a textbook that covered far too many topics. The resulting curriculum was, as many of the national reports on science have observed, "a mile wide and an inch deep." There was simply no way for her to cover all the lessons, vocabulary, and experiments described in the book in enough depth that the students would really understand the concepts being presented.

While students were interested in the demonstrations suggested by the textbook and in the experiments Ms. Fredericks had them do, there was rarely enough time to follow up on the results, so the students had difficulty understanding them. Also, Ms. Fredericks knew that her students needed to do well on the state tests given in science at the end of eighth grade, but 80 to 90 percent of them were failing the end-of-chapter tests in the textbook.

As the year went on, her students became increasingly disrespectful to each other. Part of the problem, she knew, was that they were bored, but she didn't know how to make her lessons more interesting while still following the curriculum. The more she asked her students to sit quietly and do their worksheets, the more they acted out.
